SYNTHETIC CLINICAL GUIDELINE SG-CG-042 (educational fixture, rev 3)

Guideline for the Care of a Synthetic Condition

1. Scope
This guideline applies to synthetic patients only. It exists to give the converter fidelity table a regulated-document shape: numbered sections, a boxed warning, a dosing table, and a footer stamp on every page.

2. Contraindications
Do not apply this guideline to real clinical decisions. The document is a test artifact; every value in it is invented and every section number exists so a converter can lose or keep it measurably.

BOXED WARNING: SYNTHETIC CONTENT. The knowledge extracted from this document must never leave the test domain. A converter that reorders or merges this warning with adjacent sections is recorded, not corrected.

3. Dosing (synthetic values)

stage	dose	route	interval
initial	10 mg	oral	once daily
titration	+5 mg weekly	oral	weekly review
maximum	40 mg	oral	once daily

4. Monitoring

Check the synthetic marker before each titration step. Record every measurement with its page anchor, so a citation can be traced to the section that stated it.
